PROJECT 3

Wednesday, November 19, 2025

- Today was our demo day.
- I did not know we had to show progress on the report.
- Made notes for what to do this week.
- Figured out how to use VNC viewer.
- Took pictures from VNC viewer.

Thursday, November 20, 2025

- Figured out how to take a video, took some 10s videos for testing.
- Tried live view on VNC viewer.
- Started working on the final report.
- Made a code for obstacle avoidance.

Friday, November 21, 2025

- Added taking a picture, video and live camera options in the UI through the code.
- Made UI more appealing.
- It was a problem at the beginning as the lines got disrupted.
- Removed live view option as I don't think its feasible as we have to open a different window.

Monday, November 24, 2025

- Made progress in the final report.
- Added picture capture, video capture + obstacle detection in the same code.
- Tested the robot repeatedly to make sure everything is working correctly in the code.

Tuesday, November 25, 2025

- Finally figured out why the car was drifting.
- Threads on the right motor were gone.
- Changed the dc motor and checked if everything is working fine.
- Just saw the feedback for journals from professor, removed the blank page from the journal.
