PROJECT 3

Wednesday, October 1, 2025

- Today was our demo day. We did great but Nikunj did not create Readme as I told him last week, so we got marked down heavy.
- After class I went to the lab, Updated the code for checking PWM on the robot with the help of oscilloscope.
- Set 4 different duty cycles and all of them worked perfectly.
- Captured good number of pictures and videos that can be used in report and our presentation.

Thursday, October 2, 2025

- As we have the demo next week I am planning on making the structure more stable and permanent.
- Got a power bank which is small and lightweight.
- I tried to make the cable shorter which got a bit complex.
- Tested the robot by running it around in the lab for a little while.

Friday, October 3, 2025

- Started on the presentation, got points from my notepad as I wrote them in class.
- Chose the theme, made first 4 slides for the presentation.
- Ordered a small cable for the Robot.
- Named the project RoboRide.
- Worked on the hardware part, did some hardcore testing so that it works good in the demo.

Monday, October 6, 2025

- Today I had math midterm so I could not do Project a lot.
- Basically I just worked on the presentation at night.

Tuesday, October 7, 2025

- I made a video for this project.
- I took some pictures for presentation.
- Made the wiring intact and used tape for batteries and power bank to be tightly hold.

- Completed the presentation, added many visuals and colors so that it is attractive.
- Did some final testing at midnight, just to make sure.
