## PROJECT 3

### Wednesday, September 10, 2025

- I worked till late midnight yesterday and was able to setup the pi and added the "Hello World" sample code.
- After class I setup Vncviewer for the pi.
- Made note of new website which is very helpful. (Digikey)

### Thursday, September 11, 2025

- Researched on PWM from different websites like BYJUS and circuit digest.  
[PWM - Pulse Width Modulation - Analog Circuit Design](#)
- Made notes on PWM and got started with the PPT.
- Completed the PPT and shared with my group members.
- Created a new repository called project 3 and added week 1 content.

### Friday, September 12, 2025

- Today I could not attend the projects class as there was a sudden change in timetable.
- Nikunj said the presentation went very well.
- I started working on the next weeks presentation again.
- Had a problem with ssh into the pi, had to reset and work all over again,
- It was not responding when I tried to ssh in the third time.

### Monday, September 15, 2025

- I learned more about L239d motor driver IC with help of YouTube.  
[https://youtu.be/PVyAcgYkzDs?si=gb\\_UXRcYRoUyCGMA](https://youtu.be/PVyAcgYkzDs?si=gb_UXRcYRoUyCGMA)
- Added some slides and modifications to the presentation.
- Synched pi and started working on the Led task for this week.
- Completed the presentation.
- Added visuals from Digikey and Google.

### Tuesday, September 16, 2025

- Completed the assignments for this week from my side.
- Nikunj took the work of coding rpi for LED.
- He said we can be in class early and I can try it as well.

➤ Submitted the deliverables.
